## ABSTRACT

This report represents the second annual response of the U.S. Commissioner of Education to the requirements of Section 437 of the General Education Provisions Act instructing the commissioner to obtain annual reports from the states describing state uses of federal funds under the state-administered federal education programs. The nine summary tables were designed to show in concise form every data item specified in the legislation, to permit ready comparisons across all states and programs, to display from many perspectives the characteristics of grantees and beneficiaries of the state-administered federal education programs, and to illustrate the varying administrative policies of the states within their prescribed responsibilities to suballocate federal funds. Tables 1-3 summarize all the data. Tables 4-9 are analytical. Table 4 presents a breakdown of expenditures by type of grantee agency. It shows that 78 percent of all expenditures were made by local education agencies (LEAs). Recognizing this, Tables 5-9 provide further analysis of grants to and expenditures made by the LEAs alone. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE  
OFFICE OF EDUCATION  
WASHINGTON, D.C. 20202

TO THE CONGRESS OF THE UNITED STATES

As Commissioner of Education I have the honor to submit herewith the second annual report concerning State uses of Federal education funds under the State administered Federal education programs, as required by Section 437 of the General Education Provisions Act.

This report was prepared by the Office of Planning, Budgeting, and Evaluation and is transmitted in accordance with the requirements of subsection 437(b) of Public Law 90-247, as amended.

Respectfully yours,

Ernest L. Boyer  
U.S. Commissioner of Education

## Preface

This report represents the second annual response of the U.S. Commissioner of Education to the requirements of Section 437 of the General Education Provisions Act. That legislation, enacted by Section 512 of the Education Amendments Act of 1974, instructs the Commissioner to obtain annual reports from the States describing State uses of Federal education funds under the State administered Federal education programs.

Until the enactment of this legislation, the information desired was not easily available for use by the Congress, the Executive Branch, or the general public. With the implementation of Section 437, summaries and analyses of the required information are hereby presented to the Congress as directed. For the convenience of the States, details of all collected data will also be prepared by the U.S. Office of Education, and will be returned to the respondents in usable tabular form for public dissemination by the States.

The necessary data collection and reporting system for the implementation of Section 437 has been developed and made operational through full consultation with the Committee for Evaluation and Information Systems (CEIS) of the Council of Chief State School Officers (CCSSO), by the complete cooperation of the State education agencies and other State agencies, and with the assistance of the National Center for Education Statistics (NCES) and the respective program offices of the U.S. Office of Education (USOE).

Questions about the report may be directed to Mr. Murray Spitzer, Project Officer (Office of Planning, Budgeting, and Evaluation), at telephone number (202)245-1950.

## 1.0 BACKGROUND

### 1.1 The Information Gap in State Administered Federal Education Programs

The U.S. Office of Education administers approximately 100 programs to provide Federal funds in virtually every aspect of the educational system. During fiscal year 1976, 26 of these programs--about half of the total funding--were administered by the States as "formula grant" programs.

Legislation for a formula grant program defines the various formulas or mechanisms by which the total appropriation is first allocated among States and other direct recipients. Each recipient then further allocates Federal funds to the ultimate intrastate grantees such as local education agencies. Methods of suballocation vary with programs and are specified in law and regulations.

While the formula grant system, with State suballocations, has been an effective and workable funding mechanism, it has not been well designed to feed back information concerning those suballocations. Neither USOE program offices nor the Congress have always been well informed. For some time, the Congress has voiced its concern over this important omission.

Senate Report No. 93-763, March 29, 1974, stated (page 62):

"One of the major concerns of the Committee has been the continuing inability of the Office of Education to provide fiscal data concerning local distribution of funds under State plan programs. State level allocations are made by the Office of Education, but States are not required to report on their intrastate allotments of funds among local educational agencies. Therefore, Congress is called upon to make decisions about extension and amendments of Federal aid programs in the absence of any information about their existing patterns of distribution.

"The Commissioner has authority under various pieces of legislation to require such reports as he believes necessary to enable him to perform his functions. He has, apparently, not believed timely detailed fiscal data necessary; the Committee believes that they are.

"Therefore, as a part of the administrative consolidation, the Committee bill provides that the Commissioner of Education shall require a report on uses of Federal funds in each State's annual program plan under the programs to which the consolidation applies. That report shall describe the uses of Federal funds expended in that State for the two preceding fiscal years, describe the policies and procedures used by the State educational agency in distributing such funds, and include a statistical report on the children

served or affected by the program during the second preceding fiscal year. In addition, with respect to such year, the report must also include a compilation of reports from local educational agencies within the State, setting forth the amount of Federal funds received by each agency and the purpose for which such funds were expended, plus the data necessary for the statistical report. All reports must be made reasonably available to the public.

"The Committee hopes that these reporting requirements will aid decision-makers at all levels in making judgments concerning allocations of limited Federal funds. It is the nature of bureaucracies that decisions are made by a number of people who often fail to coordinate their efforts. Each program sets its own criteria for distribution of funds, pursuant to the more general criteria established by legislation. In the absence of comparative data such as those proposed to be required in the reports, unnecessary overlap and duplication in programs and funding can occur. The provision is intended to provide the information base necessary to avoid this to the greatest extent possible."

Comments of the House Education and Labor Committee were similar, as stated in H.R. Report No. 93-805, February 21, 1974, on page 74:

"The Committee has adopted this amendment because of its concern for accountability in Federal education programs. The Office of Education does not know at this time the aggregate amount that each local school district or each public and private agency in the country received in Federal aid for education. Neither does it know the exact distribution to States and local agencies of the aid it provides under each one of its programs.

"The Committee believes that a beginning in accountability can be made by requiring the Office of Education to be aware of, and to analyze, the impact of its aid on States, on local school districts, and on other public and private agencies. Likewise, States and local agencies should analyze the impact on themselves of Federal educational aid."

#### 1.2 The Legislative Mandate to Provide the Required Information

As shown in the previous section, the Congress recognized that a common "information gap" problem existed in all of the State administered Federal education programs. To correct the problem, Section 512 was included in the Education Amendments Act of 1974; the bill was enacted as Public Law No. 93-380 on August 21, 1974.

Section 512 established a new Section 437 of the General Education Provisions Act. The full text of Section 437 (as amended) is shown as Exhibit I.

EXHIBIT I  
U.S. Office of Education  
Text of Section 437 of the General Education Provisions Act

RESPONSIBILITY OF STATES TO FURNISH INFORMATION

Sec. 437. (a) The Commissioner shall require that each State submit to him, within ninety days after the end of any fiscal year, a report on the uses of Federal funds in that State under any applicable program for which the State is responsible for administration. Such report shall:

- (1) list all grants and contracts made under such program to the local educational agencies and other public and private agencies and institutions within such State during such year;
- (2) include the total amount of funds available to the State under each such program for such fiscal year and specify from which appropriation Act or Acts these funds were available;
- (3) with respect to the second preceding fiscal year, include a compilation of reports from local educational agencies and other public and private agencies and institutions within such State which sets forth the amount of such Federal funds received by each such agency and the purposes for which such funds were expended;
- (4) with respect to such second preceding fiscal year, include a statistical report on the individuals served or affected by programs, projects, or activities assisted with such Federal funds; and
- (5) be made readily available by the State to local educational agencies and other public and private agencies and institutions within the State, and to the public.

(b) On or before March 31 of each year, the Commissioner shall submit to the Committee on Labor and Public Welfare of the Senate and to the Committee on Education and Labor of the House of Representatives an analysis of these reports and a compilation of statistical data derived therefrom.

### 1.3 Response of the U.S. Office of Education to the Congressional Mandate

Soon after passage of Public Law 93-380, a project to implement the new Section 437 of the General Education Provisions Act was established within the Office of Planning, Budgeting, and Evaluation (OPBE) of USOE. The project was initiated with three major concurrent activities:

- (1) Identification and analysis of policy issues;
- (2) An immediate data collection effort (on an ad hoc basis) to provide an early response;
- (3) Development of the permanent reporting system.

These requirements could not be met routinely by OPBE staff capabilities. To provide additional technical support, a contractor was selected under a competitive procurement. Contracted field work began on July 1, 1975. The first cycle data collection activity began immediately and is described in Section 1.3.2. Work on identification and analysis of policy issues followed, and is described in Section 1.3.1. Development of the permanent reporting system was based on the experience of the first cycle and findings of the policy study. The required system was developed by OPBE staff in time for use during the second cycle. It is described in Sections 1.3.3, 1.3.4, and 2.0.

#### 1.3.1 The Planning Study

The analysis of major policy issues affecting the Section 437 project began with a formal survey of the State education agencies. The survey used an OMB-approved, structured-interview questionnaire. Its objectives were:

- . Assessment of the current capabilities of the State education agencies to respond to mandated requirements of Section 437;
- . Definition of data requirements;
- . Evaluation of system design alternatives.

The survey was conducted by the contractor. Some of the more important issues examined are summarized below, in the format of the structured interview questions presented to State officials:

Question 1. What information should be reported to satisfy the legislative requirement for "a list of grants and contracts"?

The survey's findings were that final or amended obligations, rather than initial obligations, should be reported by the States.

Question 2. Should final obligations or final expenditures be reported for the second preceding fiscal year, for the "amount of Federal funds received by each such agency"?

The legislation literally calls for a report on "the amounts of such Federal funds received by each agency and the purposes for which such funds were expended." (Underscoring added.) The problem, however, is that a "receipt" amount might in too many cases be identical to the prior "obligation" amount, and would serve little purpose; in fact, it would probably be redundant. Also, since a year of actual project activity would elapse before true expenditures could be ascertained, the later figure would provide additional and useful information. The view that Congressional intent called for expenditure data is also consistent with the requirement to report "the purposes for which such funds were expended." The decision was made to collect expenditure data.

Question 3. Should program purpose categories be standardized across all programs?

The survey findings were that standardized purpose categories should be used across all programs. Recent events, however, have shown that this particular issue is extremely complex. To begin, different acts of legislation separately define desired purposes for specific categorical programs; such laws have been enacted at different points in time, under various circumstances, and for varying political reasons. Second, until the recent legislative authority under Section 406(g) was given to the Administrator of the National Center for Education Statistics, there was no mechanism for practical implementation of a long-term goal of standardization. The definition of expenditure purposes appears to pose difficult problems which are yet to be resolved. A fuller treatment of this issue is found in Section 2.2.4. At the present time we are using the purpose categories defined for each program office for its annual Financial Status Report.

Question 4. Should information be collected at the grant or agency level?

While the law calls for a "list of grants and contracts," it is evident that the common practice of awarding multiple grants to an agency for a project year generates unnecessary and undesired extra data. This project, therefore, collects the sum of multiple grants to a single agency for a given project year.

Question 5. Should data on State funding programs also be captured and reported?

For certain programs, particularly those under the Vocational Education Act, matching State funds are used with Federal funds. Although the contractor's study recommended capture of associated data, USOE policy is to limit the data collection to Federal funds only. This decision was reached not only because of the immense data burden that would have been added, but also because no direction to collect State data is found in the law.

Question 6. Should the data be collected for one year rather than two years?

The "before and after" reporting concept of Section 437 might appear to place a double burden on the States. The contractor's survey findings recommended reconsideration of this concept.

It should be recalled that the Senate report (Sec. 1.1) specifies, "That report shall describe the uses of Federal funds expended in that State for the two preceding fiscal years ..." In operational practice, it would be difficult to meet the objectives of Section 437 without a before and after system. An overriding reason for the dual collection is the prolonged time span of program projects. If the first year's collection were the only data permitted, there would be no way to report project expenditures, participants, and program purposes. By contrast, to limit the project to second year data only would greatly reduce the timeliness of reporting.

Question 7. Should local obligation data be tracked by appropriation year?

To track State suballocations by appropriation year would increase the reporting burden very substantially, would serve little purpose, and would probably require extensive changes to State and local accounting systems.

Question 8. Should actual or estimated expenditures by program purpose be reported?

The requirement to report the purposes for which Federal education funds were actually spent overshadows all other requirements of Section 437 in terms of its complexity of definition, difficulty in obtaining data, and burden on the States. A full discussion of this important topic is found in Sec. 2.2.4 of this report, "Expenditure-Purpose Data."

The items reported above were typical of the issues examined by the survey. In summary, this survey provided USOE with an in-depth understanding of the problems of implementation from the State point of view. It highlighted the extreme variety of State funding practices and accounting systems, suggesting the need for universally applicable system design criteria. The survey was also very useful in stimulating State officials to examine their own operations to assure future compliance with the reporting requirements.

An important product of the planning study was its illumination of the complex problems of funding local projects through the required mechanisms of the State administered programs. These findings were reported last year. However, we believe that this information is very helpful to an understanding of the increased scope of this report; consequently, these findings are repeated in the Appendix.

### 1.3.2 First Cycle Implementation

Using contractor assistance, work on implementation of the project began on July 1, 1975. USOE recognized the urgency of an immediate data collection effort. Normally, an elapsed time of up to a year would have been required for coordination with the respondent States, design of instruments, and forms clearance for data collection under the Federal Reports Act. To preclude this delay of an additional year, USOE directed contractor personnel to collect available data at State education agencies. With no burden imposed on the States, forms clearance was not required. That data collection effort was completed in late 1975 and initiated the first annual cycle in response to Section 437.

The first cycle collection was limited. The completed allocations of fiscal year 1974 Federal funds were the most generally available data across all States and programs. Accordingly, contractor personnel visited State administrative offices and prepared lists of the grants made by the States with fiscal year 1974 Federal funds.

For 13 of these programs, a count of program participants was also obtained. For two major programs, indicators of the programmatic purposes of expenditures were also obtained. These programs were ESEA I, Part A, Grants to Local Education Agencies; and VEA I, Part B, Basic Grants to States. No fiscal data were collected concerning program purpose.

The first cycle data collection was processed at USOE as the basis of the first annual response to Section 437. The first printed report was submitted to the Congress in 2 volumes in 1976 as the First Annual Report of the U.S. Commissioner of Education, State Administered Federal Education Funds, Fiscal Years 1974 and 1975. Volume I was titled State Administration and Uses of Federal Grants for Education; Volume II, Summary Presentation of Data on State Uses of Federal Grants for Education.

In addition, tabulated details of all collected data items were prepared by USOE and were made available to the Congress. Copies of these tabulations were returned to each State for public dissemination.

#### 1.3.3 Current Implementation Status and Second Cycle Report

Because year-to-year continuity of local program effort is very desirable, the formula grant programs are relatively stable in terms of their grantees.

Recognition of this characteristic proved to be the key to the design of the Section 437 reporting system. For the first cycle, contractor personnel had literally copied the names of grantee agencies over and over again, from various State agency program office files. Subsequently, the names of LEAs were standardized by a one-time project which matched them against a computer master file of LEA data. The result was a computerized data base that could provide a good tentative list of grantees for the second cycle.

Accordingly, OPBE staff designed a computer-generated data collection form for the second cycle. Using first cycle agency names, it could be tailored to each of almost 1400 State and program data collections. Only changes among recipient agency names had to be entered. For repeaters (the bulk of the entries) only fiscal and participant data had to be submitted.

The computer-generated collection form was successfully used for the second cycle. As expected, it has substantially reduced potential respondent burden. The system design is discussed in Section 2.0; tabulations and analyses of data from the second cycle are presented in Section 3.0.

#### 1.3.4 Further Implementation of System with Plans for Third Cycle Report

Even as the second cycle report was being prepared, plans for the third cycle report were being developed. Of interest to the Congress will be the effect of Section 406(g) of the General Education Provisions Act, enacted into law on October 12, 1976, as part of the Education Amendments of 1976.

Section 406(g)(2)(B) first requires an advance notice (in the Federal Register) of the intent to collect data, and gives respondent agencies the opportunity to comment. We have published such a notice for the third cycle and have received substantive comments. In this way the respondent States individually have an opportunity to influence the design of the Section 437 system, in addition to their ongoing cooperative activities through the Committee on Information and Evaluation Systems (CEIS) of the Council of Chief State School Officers.

Section 406(g)(1)(C) also establishes the authority of the Administrator for the National Center for Education Statistics to review all information collection activities of the Education Division of the Department of Health, Education, and Welfare (DHEW). A potential exists for duplication of data collection and reporting as a result of independent legislative and administrative actions. However, the new mechanisms established under Section 406(g) should work to mesh the specifically mandated requirements of Section 437 with all other such systems.

Programs for the third cycle are the same as the second, with the elimination of ESEA I-C, no longer funded. Expenditure-purpose data will be collected for three additional programs: Adult Education Act, Title III; VEA I-B, Special Needs; and VEA I-F, Consumer and Home-making.

The data collection form for the third cycle will display back the grant amount reported for fiscal year 1976. Respondents should find this computer-generated figure a useful guide for their third cycle report of expenditures made against such grants. This unusual "before and after" reporting structure is explained in Sec. 2.3. Its full implementation will be seen in the third cycle.

## 2.0 SCOPE OF THE REPORTING REQUIREMENT AND DESIGN OF THE PERMANENT SYSTEM

The information now being collected and disseminated under the mandate of Section 437 has always been publicly available. However, being scattered through the files of State education agencies, other State offices, and USOE program offices, the data were of limited usefulness.

With the implementation of this reporting system, that information is now not only centralized, but it is also available in computerized form. A major objective of the Congress has been to establish its own capability to review, summarize, and analyze data from the State administered programs. This objective is being realized. Further, an unanticipated bonus is now possible: through computerization of the reporting system, year-to-year analyses are also feasible.

Still further analytical potential is being developed. Of particular significance is use of the ELSEGIS code to identify local education agencies. The ELSEGIS system assigns a unique numeric code to each LEA, as well as FIPS county coding and other identifiers. The FIPS county code in turn permits valuable interactions with other U.S. Government data bases such as those of the Bureau of the Census.

The Section 437 mandate technically requires only that the Commissioner of Education present "an analysis of these (State) reports and a compilation of statistical data derived therefrom," to the Congress. While we are responding literally to this requirement, we are doing much more. For example, the mandate requires that each State make its submitted data publicly available. The combined cost of each State individually developing a system to meet this requirement would be excessively burdensome. It is a routine matter for USOE, however, to provide all of the required data listings, for all States, from the computerized data base. We are doing this.

To recapitulate, the Section 437 system now begins each annual cycle of operation by sending to State respondents a computer-generated data collection list. Respondents complete the required data items and return the form. Each annual collection is processed to prepare a new annual data base. Further processing produces:

- ° Analytical reports as required
- ° A longitudinal data base available to the public
- ° A basis for next year's data collection forms.

## 2.1 The State Administered Federal Education Programs

There were 25 State administered Federal education programs for which data were collected in 1975 for the first cycle report. An additional State administered program is mentioned in the text: this is LSCA II. (No data were collected.) For the second cycle, the college land grant program (Bankhead-Jones and Morrill-Nelson Acts) was also dropped since it is not considered representative of this project. To the remaining list of 24 programs, two new ones were added for the second cycle. These are ESEA I'-B and ESEA IV-C.

A brief description of each of the current 26 programs is given in Exhibit II. Material for the exhibit was taken from the 1975 Catalog of Federal Domestic Assistance.

The evolutionary nature of Federal education programs will continue to be reflected in the Sec. 437 project. For the forthcoming third cycle, ESEA I-C (no longer funded) will be dropped. The four programs superseded by ESEA IV-B and ESEA IV-C will disappear in the fourth cycle. They are ESEA II, ESEA III, ESEA V-A, and NDEA III.

Future changes are expected in vocational education and handicapped programs as a result of recent legislation.

## 2.2 Mandated Elements of Data Collection

The items of data to be collected and reported under Section 437 are broadly described in the legislation; some necessary interpretations have had to be made. Many issues were resolved during the planning study (see Sec. 1.3.1). One major, critical issue still remains partially unresolved. This is the definition of expenditure-purpose categories. Associated with the definition is the methodology by which the agreed-upon requirements are communicated to States and, through them, to local education agencies. This unresolved issue is treated in Sec. 2.2.4.

Nevertheless, the pattern of data requirements is clearly implied in the legislation. The mandated requirements may be classified in three groups:

1. State level data--program amounts allocated to each State under each appropriation act (that is, current and carryover amounts);
2. Local level grant data (obligation actions completed by the State during the fiscal year just ended);
3. Local level expenditure and participant data (reports to States of all project actions with respect to grants made during the previous fiscal year).

#### 2.2.1 State Level Appropriation Data

For this year's report, the allocations of fiscal year 1976 appropriation act funds to each State under the 26 programs were obtained from records of USOE's Division of Planning and Budgeting. Carryover fund amounts were obtained from the States.

#### 2.2.2 Local Level Grant Data

The lists of grants and contracts made during fiscal year 1976 by each State under each of the 26 programs form the structural basis of the Section 437 reporting system. A tentative, computer-generated list of recipient agencies (based on the first cycle data base) was sent to each State. Deletions, revisions, and additions to such lists were made by each State to reflect FY 1976 records.

Grantee identification information consists of three items:

1. An agency type code (LEA, institution, etc.);
2. Agency name;
3. For LEAs only, the nationally standardized ELSEGIS code.

The single data item collected in this grouping for all recipients is the actual grant amount.

#### 2.2.3 Local Level Expenditure and Participant Data

For this year's report, final expenditure and program participant information was reported against grants made by States during FY 1975. Data items are:

1. Final expenditures against grants made in FY 1975;
2. For 13 programs, reports of program participants related to such expenditures;
3. A code identifying type-of-participant data;
4. For five programs, a breakdown of expenditures by categories of expenditure purpose.

#### 2.2.4 Expenditure-Purpose Data

Paragraph (a)(3) of Section 437 calls for reports by the States not only of program expenditures but also of the purposes of such expenditures.

The first cycle report of last year did not attempt to collect or report fiscal breakdowns of expenditures by program purposes. We are beginning to comply with that requirement of law for the first time in the second cycle. We have found that an inordinate effort is required on our part, and also by the States, to do so. For that reason, the initial response is limited to five programs.

Contributing to the difficulty, expense, and burden of this requirement is the necessity for long term planning and coordination with the respondent States. To be able to report the required expenditure-purpose data, States must have first been able to instruct their own grantees and to organize their own internal data collection systems. Even prior to such action, the States must have received notification from USOE program offices of the designated accounting breakdowns. Such designations must also be consistent with other data collection requirements subject to the approval of the Office of Management and Budget under the Federal Reports Act of 1942.

Our policy with respect to expenditure-purpose data has been a pragmatic one. We recognized, first, that the current legislation sets no limit on applicable programs; ultimately, we feel, all program-purpose data should be reported, at least until the Congress more closely defines its intent. But we saw immediately that such a data collection would impose an initial heavy burden on State agencies and their local grantees. Accordingly, we decided to phase in the requirement. For the second cycle, only five programs were selected.

We further recognized that data that have not been generated cannot be collected. To generate expenditure-purpose data suitable for collection, a complex mechanism has to have already been in operation. This mechanism consists of:

- (1) A nationally consistent definition of categories of expenditure purpose (preferably as spelled out in the enacting legislation);
- (2) Promulgation of the definition by USOE to its grantees--that is, the States;
- (3) Acceptance of the definition by States and its communication by States to local grantees;
- (4) Design and installation of local and State accounting systems that will generate the data.

When we began to implement Section 437 we found that a suitable mechanism was already in existence. Prior actions of the Office of Management and Budget (Circular A-102) had already established a Government-wide grant reporting system, specifying a universal "Financial Status Report" format. Within DHEW this is Form HEW 601T. The form allows expenditure purposes to be defined as "Functions and Activities."

We found that many of the 26 State administered programs were already covered, for our purposes, by the designation of an OMB-approved Financial Status Report, prepared by the cognizant USOE program office. Promulgation of each program's Financial Status Report had served as proper notice to the States of the definition of expenditure-purpose categories. We are therefore successfully using this existing mechanism to ask for the required data.

However, the evolutionary changes in major State administered programs are necessarily limiting current collections. Specifically, four programs--ESEA II, ESEA III, ESEA V-A, and NDEA III--are phasing out. No purpose data will be collected. The successor programs, ESEA IV-B and IV-C, are phasing in. Purpose data collection must now wait for the fourth cycle (until the generating structure is in place). In vocational education, four categorical programs are being redefined as purposes of larger groupings. We are therefore not attempting to collect purpose data for VEA I-C, I-D, I-G, and I-H.

In ESEA I, Part A, Grants to LEAs, the required generating structure for purpose data has never been established; no data collection is as yet possible, since the generating mechanism has not yet been placed in operation.

Even with the structure in place, the actual data collection is a significant share of State burden. Breakdowns of up to 12 categories may be required for an expenditure. In effect, up to 12 additional data items may be required for a single expenditure item. (By comparison, the required grant amount, expenditure amount, participants, and participant code, are four data items.)

#### 2.2.5 Data Collection, Respondents, and Burden Considerations

While Section 437 data deal with local level information, it has been project policy from its inception to work with State education agencies only, and to request only that information which would reasonably be found in State files. Some programs in certain States are administered by State offices outside the State education agency. These were treated as individual respondents. The Bureau of Indian Affairs was treated as a State for seven programs. Data from outlying areas were collected at USOE program offices.

The potential burden on respondents has always been a matter of major concern to USOE. Accordingly, project personnel have worked continuously with the Committee on Evaluation and Information Systems (CEIS) of the Council of Chief State School Officers (CCSSO) to determine the proper data collection requirement.

However, it is in the design of the data collection system that USOE has been able to make distinct contributions to the reduction of potential burden. As previously described, the system was a computer-generated collection form. Names of potential grantees are

preprinted; if valid, no further input is required except new fiscal data. LEAs are coded for positive identification and standardization among multiple program offices in a State.

Additionally, total computerization of the system permits USOE to carry out the requirement for dissemination of all collected data, eliminating a potentially burdensome requirement for the States acting individually.

### 2.3 The Annual Cycle and Longitudinal Data

With this report the nature of the annual response to the requirements of Section 437 will be evident. The project is now centralizing the collection and dissemination of intrastate information under 26 State administered Federal education programs. In response to the Congressional request for data of the fiscal year just ended, this report summarizes grants obligated during fiscal year 1976. In response to the call for data for the second preceding fiscal year, the report summarizes expenditures and participants in projects carried out under grants made in fiscal year 1975.

Not only is this information meaningful in itself: the continuity of such information may be in some ways even more meaningful. The stability of the State administered programs is recognized. Year-to-year project continuity is often desirable, perhaps even mandatory, for program effectiveness. The implementation of Section 437 now makes possible the means of observing, tracing, and analyzing the formerly obscured continuity of program effort. This can be done in at least four ways:

- ° First, the grant amount reported by the State for fiscal year 1976 will be displayed back to program officials on the third cycle data collection forms. To match this amount, program officials will submit a report of expenditures, program participants (where applicable), and expenditure-purpose breakdowns (where applicable).
- ° Second, appearance of the FY 1976 grantee identification presumes a high probability of a FY 1977 grant also to be reported;
- ° Third, built-in coding and appropriate ADP methods will allow the continuous appearance of the same grantee agency to be tracked over any number of annual cycles;
- ° Fourth, use of ELSEGIS coding will allow additional comparisons across all programs for LEA grantees for any year, and such analysis may simultaneously be carried out on a longitudinal basis as well.

## 2.4 Quality and Accuracy of Collected Data

The heading of Section 437 is: RESPONSIBILITY OF STATES TO FURNISH INFORMATION.

We have accepted this wording as a declaration of Congressional intent, but only as a starting point. Our objective has been to take whatever practical measures are possible to assure that the information reported by this system is fairly representative of State activities.

There are, unfortunately, a number of aspects inherent in the Federal/State/local funding system which make accurate reporting difficult, if not impossible. Many of these factors are discussed in the Appendix. Funding actions are continuous throughout the year; States independently define their own fiscal years and administrative systems; carryover provisions make it impossible to achieve closure on the tracking of funds. In a conventional accounting sense, there is no way that the Section 437 reporting system can establish control totals for any program in any State. It is even difficult to achieve consistency in the comparison of one State's report with another's.

We recognized these uncontrollable aspects of the Section 437 reporting system in our design of the data collection, data processing, and information reporting systems. Basically, we have accepted as valid any data item submitted to us by any State, with the tacit recognition that it is the responsibility of the State to furnish such information. In general, we have considered it our responsibility to assure that data were accurately entered into the data base as reported, and that the summarized information presented in this report is meaningful and reasonable.

To that end, some editing of submitted data has been performed. In some cases our procedures detected inadvertent errors made by respondents. For example, in several submissions, funds were reported including cents--with the decimal point omitted! Such items if uncorrected would have reported a grant size 100 times the actual amount. In many other cases, preliminary summarized results seemed unreasonable, and data submissions were corrected by direct communication with the respondents.

In a special situation--reporting of commingled State and Federal funds--the data as submitted could not be accepted, and submitted data items were arbitrarily changed for this report. This situation is described in Sec. 3.0.

In general, every data item collected has been verified against its final representation in the data base. This is an unusual, time-consuming, and expensive procedure. However, we believe that the Section 437 report is not a survey in the usual sense, in which an error level is tolerated. It is a report to the Congress of many thousands of specific funding actions by the States. The

correct reporting of any grant in any program regardless of funding level is as important as that of any other reporting item. Despite our efforts, some errors will inevitably be found in a data collection of this magnitude. Our objective has been to contain such errors so that these submitted tabular summaries remain meaningful.

### 3.0 ANALYSIS OF STATE REPORTS AND COMPILATION OF STATISTICAL DATA

Paragraph (b) of Section 437 requires the Commissioner of Education to submit to the Congress an analysis of the State reports and a compilation of statistical data derived from them. The nine tables presented here will respond to that mandate. Paragraph (a)(5) directs that the State reports be made readily available by each State to local education agencies, institutions, and to the public. As previously noted, USOE will provide this service for the convenience of the States. Usable tabulations of all collected data will be returned to each State for further public dissemination. Additionally, the complete data collection from all States will be made publicly available by USOE in the form of a magnetic tape data base.

The nine summary tables of this report were designed to satisfy these objectives:

- ° To show in concise summary form every data item specified in the legislation;
- ° To permit ready comparisons across all States and programs;
- ° To display from many perspectives the characteristics of grantees and beneficiaries of the State administered Federal education programs;
- ° To illustrate the varying administrative policies of the States within their prescribed responsibilities to suballocate Federal funds.

For convenience, the nine tables have been designed with consistent formats. Columns of any table show State summaries, beginning with the National total; every State appears in the same position in every table. Rows of any table show information by programs, beginning with a summary of all applicable programs. Comparisons may be readily made between tables.

Tables 1-3 summarize all collected data. Table 1 shows the total funds available to each State for each program and compares this figure with the computed sum of grants made during FY 1976. Table 2 shows expenditures reported against grants made in FY 1975, and for five programs, a breakdown of expenditures by programmatic purpose. Table 3 compares expenditures and program participants for 13 programs.

Tables 4-9 are analytical. Table 4 presents a breakdown of expenditures by type of grantee agency. It shows that 78 percent of all expenditures were made by local education agencies. Recognizing this, Tables 5-9 provide further analyses of grants to and expenditures made by the LEAs alone.

Table 5 shows by State, for 18 LEA-oriented programs, the percentages of LEAs in each State receiving grants in both FY 1975 and FY 1976. Table 6 shows a distribution of these grants according to size of grant; Table 7 shows another distribution by size of LEA. Tables 8 and 9 attempt to show the distribution of Federal education funds to LEA recipients on a basis of the relative wealth of the recipient population.

Some adjustments to data submitted by States have been arbitrarily made for VEA I-B, Basic Grants to States. In several cases the States submitted reports on commingled Federal and State funds; the commingled values would have distorted the summary and analysis. In these cases we have arbitrarily reduced commingled values.

For data concerning expenditures of FY 1975 grants, we have computed reduction factors such that the total of State expenditures approximates the FY 1975 Federal allocation to the State. Factors used are:

|                |      |
|----------------|------|
| Kentucky       | 3.0  |
| North Carolina | 3.5  |
| Tennessee      | 10.0 |
| Washington     | 7.0  |
| West Virginia  | 2.5  |

For data concerning grants made in FY 1976, we have computed reduction factors such that the total of such grants approximates the FY 1976 Federal allocation to the State. Factors used are:

|                |     |
|----------------|-----|
| Kentucky       | 3.5 |
| North Carolina | 4.0 |
| Tennessee      | 4.5 |

3.1 Table 1. Funds Available to States, and Grants Made, Under  
26 State Administered Federal Education Programs,  
Fiscal Year 1976.

Table 1 meets the Section 437 mandate to report State level data (Sec. 3.2.1), and grant data for the prior fiscal year (Sec. 3.2.2). This table shows a summary for each State and program in the data collection, a national total for each program, and a State total for all State administered programs. Each State/program summary shows:

1. Fiscal year 1976 appropriation act total as obtained from USOE records;
2. Carryover from fiscal year 1975 as reported by the State;
3. Total available to State (sum of items 1 and 2);
4. Sum of grants made in fiscal year 1976, as developed by the computer system from collected data.

A star appearing with a number indicates that the reported data include commingled State funds.

3.2 Table 2. Expenditures Under 26 State Administered  
Federal Education Programs, By Purpose of  
Expenditure for Five Programs, Fiscal Year 1975

Table 2 meets the Section 437 mandate to report expenditure data against grants made in the second preceding fiscal year, for all programs, and to report purposes of those expenditures (five programs only).

Column headings of Table 2 report data by States and as such are consistent with other tables. Within each column, however, two items are reported: actual expenditure in thousands of dollars, and a percentage figure.

For programs not showing breakdowns, the percentage figure is not applicable. For the five programs showing breakdowns, the percentage is a proportion of total expenditures.

Breakdown amounts and percentages will not always add to a total. In some States or programs the breakdown amounts were either budgeted or estimated, rather than actual. In most cases such submissions were accepted as reported.

We have computed an unallocated amount for five programs by subtracting the sum of the fiscal breakdown amounts from the total expenditures figure reported separately. If the unallocated amount was negative, it has been reduced to zero.

Note that ESEA IV-B and ESEA IV-C reported grants for the first time for fiscal year 1975. Expenditures against these grants will be reported for the third cycle, next year.

3.3 Table 3. Expenditures and Participants Under 13 State  
Administered Federal Education Programs,  
Fiscal Year 1975

Table 3 completes the mandated requirements of Section 437. In response to Paragraph (a)(4), to "include a statistical report on the individuals served or affected . . .," Table 3 shows program participants as reported by States for 13 programs for which such data are most meaningful.

The participant count as reported is considered "soft" data, as contrasted with funding data which presumably represents a "hard" dollar amount. For this reason there was reluctance to develop this item any further. We find, however, that while any individual participant count may be a questionable figure, the State total tends to be a much more usable figure. We have therefore used the participant data to develop a State summary "dollars per participant" ratio. However, caution is suggested in making comparisons among States or programs since individual State definitions of participant count may vary substantially.

3.4 Table 4. State Percentage and Dollar Amount Distributions  
of Grants Under 26 Federal Education Programs,  
By Type of Recipient Agency, Fiscal Year 1976

The Section 437 project defines six major types of grantee agency: local education agencies, institutions, intermediate administrative agencies, State agencies, universities, and public libraries. The bulk of the grants and funds goes to local education agencies. However, the distribution variances among agency types by State and program may provide useful information. Table 4 is developed directly from a tabulation of the collected data.

3.5 Table 5. State Percentages of LEAs Receiving Grants Under  
18 LEA-Oriented Federal Education Programs,  
Fiscal Years 1975 and 1976

Table 5 shows by State, for 18 LEA-oriented programs, the percentage of LEAs receiving grants in both FY 1975 and FY 1976. Percentages were developed from the data collection by counting all LEAs in a State reporting either grants for FY 1976 or expenditures against FY 1975 grants.

To some extent the figures will be distorted as a result of accepted practice. In some programs several smaller LEAs may work together under a State grant awarded to an intermediate administrative agency. Such data are not coded as LEA grants and cannot be included in the analysis.

3.6 Table 6. State Percentage Distributions of the Number of Grants and Federal Funds Under 18 LEA-Oriented Programs, By Size of Grant, Fiscal Year 1976

Table 6 shows the distribution of grants under 18 LEA-oriented programs according to the size of grant. It provides some information to show the variances in distribution for a particular program, across States. Table 6 will also show whether there is a concentration of funds among a few large grantees or a more widely dispersed distribution among many grantees.

The 18 LEA-oriented programs are those listed in Table 5. This table shows, first, totals for those 18 programs; below the total distribution, individual program distributions for six of the more heavily funded programs with heavy LEA orientation.

3.7 Table 7. State Percentage Distributions of the Number of Grants and Federal Funds Under 18 LEA-Oriented Programs, By Size of LEA, Fiscal Year 1976

Table 7 shows the percentage distribution of grants and dollar amounts under 18 LEA-oriented programs, according to the size of the recipient local education agency. This analysis permits comparisons of variances in distribution policies among States and programs.

Note that the 18 LEA-oriented programs are those listed in Table 5. Table 7 shows, first, totals for the group of 18 programs. Following the totals, Table 7 shows detailed program distributions for the nine largest programs among the 18.

3.8 Table 8. State Percentage Distributions of LEA Grant Funds Under 18 Federal Education Programs, By County Income Relative to State Average, With Corresponding Population Percentages, Fiscal Year 1976

The Congress has repeatedly manifested its concern with the educational needs of individuals from low-income families as well as those residing in low-income areas. The State administered Federal education programs are generally designed to attempt to meet such special educational needs. In Tables 8 and 9 we are endeavoring to demonstrate analytically the extent to which those Congressional objectives are being met.

Such an analysis has to overcome a severe initial handicap: about 78 percent of the funds allocated by the State administered programs go to LEAs, but there is no nationally consistent statistical data showing a measure of wealth for LEAs.

However, there does exist a current data base, prepared by the Bureau of the Census for Federal revenue sharing allocations, which shows county population and county per capita income. As previously noted, the Section 437 data base now shows, for LEA records, the county in which the LEA is located. These circumstances permit the development of an approximate methodology which we have used in the production of Tables 8 and 9.

The methodology is as follows:

Within each State, each county was compared with the State average per capita income. Each county was then ranked as being either a "wealthier" area (above the State average) or an "other" area (below the State average). Data from each identifiable LEA grant were then accumulated by county.

In many States there will be more than one LEA in a county; however, under this methodology, any LEA would move that county's total population into the summary for either "wealthier" or "other" populations. As a result, some distortion was inevitable.

Another distortion in this analysis could not be overcome because of the concentrations of population and wealth of the counties in a State. This causes the analysis to show that a disproportionately high percentage of the population lives in "wealthier" areas! The example below explains this curious phenomenon of data:

### Illustrative Example

| <u>County</u> | <u>Population</u>    | <u>Per Capita<br/>Income</u> | <u>Wealth<br/>\$ (000)</u> | <u>Category</u> |
|---------------|----------------------|------------------------------|----------------------------|-----------------|
| 1             | 50,000               | \$ 2,000                     | 100,000                    | "Other"         |
| 2             | 100,000              | 2,100                        | 210,000                    | "Other"         |
| 3             | 150,000              | 2,200                        | 330,000                    | "Other"         |
| 4             | 200,000              | 2,300                        | 460,000                    | "Other"         |
| 5             | <u>1,000,000</u>     | <u>\$ 2,500</u>              | <u>2,500,000</u>           | "Wealthier"     |
|               | 1,500,000<br>(Total) | \$ 2,400<br>(AVG)            | 3,600,000<br>(Total)       |                 |

Note that the weighted average per capita income is \$2,400. The first four counties have lower figures; they are therefore "other" (that is, less wealthy). Only the populous fifth county has a per capita income above the State average. But in this analysis, then, two-thirds of the State's population live in "wealthier" areas. This phenomenon is consistently seen in Tables 8 and 9.

Understanding this unexpected effect, the tables may then be examined to yield very useful data. The population percentages in any given State/program report will not always add to 100, if not all counties received the minimum of one grant. The percent of program dollars will always add to 100 since all grant data items are attributed to a county summary grouping.

To interpret the data shown in Tables 8 and 9, consider the example below:

### Illustrative Example

|                                | <u>Percent of<br/>State POPN</u> | <u>Percent of<br/>PGM \$</u> |
|--------------------------------|----------------------------------|------------------------------|
| Any LEA-Oriented Program       |                                  |                              |
| ALL LEAs IN WEALTHIER COUNTIES | 75                               | 65                           |
| ALL LEAs IN OTHER COUNTIES     | 20                               | 35                           |

In this example (typical of the analysis) one or more grants went to certain wealthier counties, representing 75 percent of the State's population. Other grants went to certain less wealthy counties, representing 20 percent of the State's population. Counties representing 5 percent of the State's population received no grants.

But the funds distribution was disproportionately high in favor of the less wealthy counties, because the less wealthy 20 percent of the State's population received 35 percent of program funds, while the wealthier 75 percent of the population received only 65 percent of total program funds.

NOTE: "WEALTHIER" COUNTIES ARE THOSE WITH PER CAPITA INCOME ABOVE STATE AVERAGE.

3.9 Table 9. State Percentage Distributions of LEA Grant Funds  
Under 18 Federal Education Programs, By County  
Income Relative to National Average, With  
Corresponding Population Percentages, Fiscal Year  
1976

Table 9 is similar to Table 8. The difference is that all the counties in any particular State are first ranked by per capita income against the national average per capita income rather than against the State average.

TABLE 9

U.S. OFFICE OF EDUCATION  
STATE PERCENTAGE DISTRIBUTIONS OF LEA GRANT FUNDS UNDER 16 FEDERAL EDUCATION PROGRAMS,  
BY COUNTY INCOME RELATIVE TO NATIONAL AVERAGE, WITH CORRESPONDING POPULATION PERCENTAGES  
FISCAL YEAR 1976

## APPENDIX

### THE FEDERAL/STATE/LOCAL FUNDING PROCESS

In conventional accounting practice, the whole is equal to the sum of its parts. In theory the Federal/State/local funding process could be neatly illustrated by that simple principle. For example, we could begin with the annual appropriation for a particular State administered program--say, \$100 million. A typical State might be allocated \$2 million. That State would in turn make, say, 40 separate grants, averaging \$50,000 each. The accounting control total would be the original \$2 million State allocation. By summing the grants, we would prove out to this total (or know that an error had occurred).

The tables of this report will not balance to such established control totals; in fact, they cannot. The explanation lies in an understanding of the complex nature of the Federal/State/local funding process.

#### A1 Complexities of the Funding Process

The process by which Federal funds are appropriated, allocated to States, suballocated to local grantees, and expended for project purposes is constantly evolving. To begin, this report considers 26 identifiable programs. They have originated at different times from many different legislative actions; many have been subsequently amended; they use different data bases and allocation formulas. The timing cycle for the funding process has always been extremely critical. In past years, the final passage of the appropriation act near the end of the fiscal year has left States and their grantees in precarious situations; in fact, the inappropriateness of the timing cycle has finally required the enactment of two additional items of legislation (advance funding and the Tydings Amendment) to correct it. But the correction itself introduces new characteristics to the process which inhibit the normal accountability of the process, at least as far as reporting under Section 437 is affected.

The first timing cycle corrective measure to have an effect was the so-called "Tydings Amendment" (Section 412(b) of the General Education Provisions Act). Under this provision of law, "funds . . . which are not obligated and expended . . . prior to the beginning of the fiscal year succeeding the fiscal year for which such funds were appropriated shall remain available for obligation and expenditure . . . during such succeeding fiscal year."

The Tydings Amendment has been so successful in relieving problems of late and uncertain funding that it now must be viewed as an essential element of the Federal/State/local funding process. Its effect was

described in Volume I of the First Annual Report on State administered Federal education funds, as follows:

"Most States and grantee agencies use the carryover provision to maintain stability in revenues by smoothing out fluctuations that occur in their year-to-year entitlements. At the grantee level, this can occur only in those programs, such as ESEA I, in which unobligated funds are not returned to the State at the end of the fiscal year. Where carryover can occur at the local level, Federal aid has become a far more predictable element in the development of the annual agency budget.

"For example, a local school district may receive an increase in its ESEA I obligation part way through a fiscal year and elect not to write proposals for the additional amount since insufficient planning time remains to permit effective use of the funds. Instead, those funds are added to the amount that is expected to be available in the following year, and projects are planned and proposals written for the combined amount.

"In those program areas in which obligations per district are determined on a competitive basis rather than by formula, unused funds typically revert to the State for redistribution to other districts. This may also occur in formula allocation grant programs such as VEA I-B, where the State does not permit carryover at the grantee level, and in ESEA I if a grantee agency does not plan to use its obligation. Some local school districts receive such small entitlements that they elect to return the funds to the State to be redistributed to other districts rather than to develop a cooperative project with neighboring districts that may be similarly situated."

Yet the very success of the Tydings Amendment has made it all but impossible to achieve an accounting closure, at least for this report. Consider the typical State allocation proposed earlier. That State would receive its \$2 million new allotment as before. Let us also assume that \$800,000 of prior fiscal year funds had not been obligated, and thus becomes available for obligation this succeeding year. The total now available to the State is \$2,800,000. Only by rare coincidence would the same amount be again unobligated; let us assume the new carryover is \$600,000.

Thus, the State is now making grants totalling \$2,200,000 during the current fiscal year. The sum of these grants has nothing to balance against. (If Section 437 called for the new carryover amount, that would perhaps be a useful step towards closure, but it does not.) Even if the new carryover amount were reported, the problem would still not necessarily be solved, because the funding process between State and local levels is additionally dynamic (as described later). For many reasons, it is still very difficult to obtain an accounting snapshot of the process which freezes all transactions in a consistent time frame.

Advance funding is, fortunately, a very useful refinement of the funding process with respect to its potential for improving accounting closure. Advance funding (Section 411 of the General Education Provisions Act) permits the appropriation of funds one year in advance of their use "to the end of affording the responsible State, local, and Federal officers concerned, adequate notice of available Federal financial assistance for education . . . "

Another feature of advance funding is that funds are made available for suballocation on July 1 prior to the year of use. This feature should encourage States to phase back to a normal allocation year with less reliance on the carryover relief of the Tydings Amendment.

## A2 Typical Operation of a State Administered Federal Education Program

Much of the material in this section was published in the "First Annual Report" (previously cited). It is being included here because of its pertinence and importance to an understanding of the scope and limitations of this report.

The "typical operation" is keyed to three successive years. The first year is the planning year; the second year is the actual project year; the third year is concerned with project reporting and closing of books.

It is instructive to note that the original appropriation year source of project year funds is largely immaterial. If current fiscal year funds are made available in time through the USOE grant process and the State suballocation process, the project may operate accordingly. Otherwise, carryover funds under the Tydings Amendment now correct for timing contradictions. Furthermore, it is altogether possible to carry out a local project with a mixture of two years' funds (identifiable or not); or the local grantee itself may have legally carried over prior year funds from its own State suballocation.

Ten major steps in the typical operation have been identified. Steps 1 through 6 must take place in the planning year. Step 7 is project execution and of course must take place during the project year. Step 8 covers amendments to the original grant; these amendments could occur at any time. Steps 9 and 10 close out the project.

Exhibit III illustrates the cycle of activities of a typical State administered Federal aid program beginning with the planning stage in Year 1, through implementation of the project in Year 2, to the final report and closing of the project account which occurs in Year 3 or later.

**TYPICAL ADMINISTRATIVE AND FUNDING CYCLE**  
**OF A FEDERAL AID PROJECT**

————— NORMAL OCCURRENCE  
 ||||||| POSSIBLE EXTENSIONS

#### Step 1--Tentative Project Plans Are Developed by LEAs

The planning process begins many months before the start of the school year in which the project is to be conducted. For ongoing grant programs, in which virtually all agencies receive funds on a formula basis each year, LEA administrators will have a reasonably good idea of the minimum amount that they can expect to have available. As far as budget planning is concerned, therefore, Federal funds are viewed in essentially the same way as State and local revenues. But for competitive grant programs such as Title VI-B of the Education of the Handicapped Act (EHA) and ESEA Title III, the funding level is typically far less certain. Throughout the planning phase, LEA Federal program administrators in most States are in frequent contact with SEA program and fiscal officials to determine (1) what types of projects will be approved, and (2) estimated funding levels.

#### Step 2--Final Obligations of Current Fiscal Year Funds Are Made To LEAs by SEA

In past years, the final obligations to local agencies for the year already under way were made in late winter or early spring, when the school year was more than half over. This late funding problem occurred when appropriations were enacted several months into the fiscal year. It then took an additional two to three months for the Office of Management and Budget, the USOE program offices, and the SEA program offices to complete their funding and grant administration procedures so that the SEA could notify each LEA of its final obligations. If the obligations exceeded the preliminary amount that the LEA had planned on having available, funds were frequently carried over into the following year.

#### Step 3--Preliminary Obligations for the Next Fiscal Year Are Announced to LEAs

Shortly after Step 2, the SEA will notify LEAs of the expected preliminary obligation for the next year. The USOE will have given the States such information based on the current status of the appropriation bills in the House and the Senate. The preliminary obligation is added to those funds from the current year that can be carried over in determining the total amount available to be obligated to grantee agencies.

#### Step 4--LEAs Submit Grant Applications

Grant applications for programs obligated on a formula basis will typically be submitted in May or June of the school year preceding the one in which the projects are to be conducted. Competitive grant programs usually require earlier submissions to allow more time for SEA review.

#### Step 5--Applications Are Reviewed by the SEA and Changes Are Negotiated

By this point, the project content and scope, as well as funding levels, will have been established. Since considerable contact has already occurred between SEA and LEAs, the changes required by SEA officials are often addressed to evaluation procedures rather than to budget or project modifications.

#### Step 6--Projects Are Approved and Funds are Obligated by the SEA For Use by LEAs

In this process, the SEA approves the budget and the planned use of funds for each grant administered by a grantee agency. Though SEA approval typically occurs sometime between June and August so that projects can begin at the start of the school year, some grants will be approved throughout the course of the year. For example, ESEA II and NDEA III (National Defense Education Act) grants, which are used to purchase books and equipment, respectively, were often made during the course of the school year. (These two programs are now consolidated in ESEA IV-B.)

This step in the grant cycle represents the first point where (1) a key decision is made by the SEA, and (2) a formal record is made of that decision.\* That record is in two forms. First, the SEA program office maintains a copy of the approved grant application form, which contains information about each project, including the pupils to be served, the project's purpose, and the budget. Second, the amount of the total budget is provided to the SEA fiscal official responsible for maintaining the accounts for that program area and approving vouchers for payment to the LEA.

Therefore, the grant award form and the approved project budget serve as the first vehicles for recording information about the decisions made by an SEA concerning the distribution and use of Federal funds to LEAs within each State. The fiscal or budgetary data included in the SEA accounting system comprise that which this present report to Congress must include concerning the preceding fiscal year's distribution of grants to LEAs.

#### Step 7--Projects Are Conducted by LEAs

The majority of projects are supported by grants for a single school year or part of that year. A number of projects

---

\*Some grant programs, particularly those in vocational education, are administered without the formal grant approval process. This procedure is discussed later in this section.

will be conducted in the summer. Occasionally, projects will begin in one year and extend into a second. Projects typically are not funded for two consecutive years, though tentative approval may be given for a second and third year, with the budgets for each year approved one year at a time. Approval of grants for the purchase of equipment or consultants' services rather than the services of teachers or paraprofessional personnel may occur very late in a year for purchase during that year.

#### Step 8--Amendments to the Original Grant Are Approved

Throughout the term of an approved project, an LEA may request that certain changes be approved by the SEA. Amendments to grants are generally addressed to the reallocation of one line item to another line item within the total budgeted amount. Rarely do they represent major changes in a project or additions to the budget. For the most part, amendments reflect changed conditions: a particular position could not be filled or an item purchased. Amendments also reflect the following conditions:

- ° Notification to the State from the Federal Government of the final State level allocation for the current fiscal year
- ° Reobligations of funds among local agencies based upon the agencies' current or anticipated use of the funds

The final obligation data should reflect all such amendments and be an accurate indicator of final project expenditures.

#### Step 9--Final Project Reports Are Submitted by LEAs to the SEA

Final grant reports, providing information on encumbrances and expenditures, typically are required to be submitted by LEAs approximately three months after the close of a project year. While many districts comply with this expectation, others, particularly large city districts that administer a host of projects, are often several months or more late with their final project reports.

#### Step 10--The Ledger Books on a Project Are Closed by the SEA

Books on a grant usually are closed when the SEA makes its final payment to an LEA for the last expenditures incurred in connection with that grant. However, SEA fiscal officers may adjust project fiscal records after final payment has been made in order to assure that all funds available from an earlier

appropriations act are expended by the State before those from a more recent act are used. For whatever reasons, the fiscal records on a particular project are frequently not closed until 2 to 3 years after actual project activities have been concluded.

The project planning and funding cycle just described is typical of many State administered programs in most States, but it is not descriptive of a number of situations. In many States, ESEA I and III, VEA (Vocational Education Act) programs other than I-B, AEA (Adult Education Act), and EHA VI-N usually involve strict adherence to the standard project/proposal/SEA approval/obligation cycle. But in other program areas, such as ESEA II and NDEA III, formal grant or project applications may not be required by SEA program officials who make formula-based obligations to LEAs. The obligation serves as an upper limit on the amount for which vouchers (for expenditures that conform to Federal and State guidelines) can be approved. The SEA fiscal office then authorizes payment to LEAs for such vouchers. Guidelines in such program areas are quite specific, and expenditures for personal services are not permitted.

The above process rarely applies to programs such as VEA I-B in those States in which the Federal funds are commingled with State aid. Expenditure vouchers will be approved if they fall within Federal and State guidelines, though grantee agencies are given considerable discretion over expenditures. For LSCA grants, the State library commission typically centralizes the planning process, and funds are obligated to individual libraries or regional cooperatives in accordance with Statewide purposes. Finally, the higher education programs generally do not employ grant procedures comparable to those in the elementary and secondary education areas.

### A3 Inherent Problems of Reporting and Tracking Data

The effect of the Tydings Amendment on the problem of accounting closure (for this report) has already been described. Several other aspects of current practice, all of which contribute to the reporting problem, have been previously described in the "First Annual Report." Pertinent material is repeated or paraphrased below with only minor updating. In general, States are free to design their own accounting systems for Federal funds. Various practices adopted by States, as well as the somewhat fluid nature of projects carried out under Federal programs, tend to make the suballocation process dynamic. There is no mandatory requirement for immediate tracking and reporting of funds. In short, all of these factors inhibit the development of a situation in which a precise accounting of the Federal/State/local funding process could be made.

### A3.1 Moving Budgets

Federally funded projects and their budgets are often amended throughout a project year. Local conditions may change, a particular position may not be filled, or materials may not become available. Amendments to a project plan or budget are necessary from a practical standpoint, but they produce various pictures of the fund distribution pattern, depending on the time of data capture.

If the grantee records do not reflect all adjustments or amendments made, the fiscal data will not reconcile with final State obligation amounts available. Since the records only reflect the budget at one moment in time, it becomes important to insure that all final amendments have been included. Under the Section 437 system, this requirement may be impossible to meet.

### A3.2 Over- and Underbudgeting

The practice of over- or underbudgeting of grants--SEA approval of grant budgets larger or smaller than the amount of funds available--contributes to difficulty in reporting final obligations. Some grantee agencies write project proposals for less than the total amount of funds available to them for a given fiscal year.

In like manner, State program officials often consciously over-obligate funds at the start of a fiscal year. Overobligating becomes a practical management technique when, for one reason or another, many districts do not use all of the Federal funds available, and unused funds revert to the State to be reobligated to other districts.

For example, if a State's experience in prior years indicates that 5 percent of the original total obligated amount will be unused by the end of the fiscal year, State program officials will overobligate by 5 percent. Such officials will closely monitor the use of funds in local school districts, and when it is clear which districts will have unexpended funds, they will redistribute the unused funds to those districts that require additional funds.

### A3.3 Commingling of Federal and Non-Federal Funds

Analyzing the distribution and uses of Federal funds is difficult when State categorical aid is commingled with Federal aid, as is prevalent in VEA I-B and other similar programs. Two types of commingling have been reported:

Fiscal commingling--The sum of Federal and State funds is viewed by the State as the total available to be obligated to grantee agencies; no distinction in source of funds is made at the time of obligation, and fiscal officers make the purely arbitrary decision as to whether an expenditure will be paid from Federal or State funds at the time of payment. Fiscal commingling is more typical in, and particularly characteristic of, vocational

education programs. Where it occurs, it is impossible to identify the specific distribution of Federal funds; instead, the Federal and State funds are reported together.

Programmatic commingling--Federal and State funds are kept separate and easily identifiable, but at the grantee level they are used to support a common program which has been approved as a single entity by the SEA. Programmatic commingling is less common, but blurs the attribution of project purposes and participants to the Federal share.

#### A3.4 Loss of LEA Identity

Most of the grants and funds in the State administered Federal education programs are distributed to local education agencies. Most of the 26 programs are specifically LEA-oriented. The computational analyses presented in the nine tables of this report have been concentrated on LEAs, primarily for this reason. Also, LEAs are more standardized for computational purposes than other types of grantees. (Analysis is greatly aided by the use of the existing ELSEGIS code.)

However, several current practices could tend to reduce the potential effectiyness of such analysis by distorting the identity of true LEA recipients of Federal funds. These practices, again, have evolved as practical methods of solving local problems. But when funds actually used by smaller LEAs are aggregated in one grant to another type of agency, that use of Federal funds by LEAs cannot appear in the analysis. The situation was discussed in the "First Annual Report," as follows:

Grants in a number of program areas are made to local or other State agencies in which the ultimate users of the Federal funds are difficult, if not impossible, to determine. The Federal FY 74 data were traced only to the grant administering agency; if activities supported by the grant were actually conducted by another subagency below the grantee, information on ultimate user agencies was generally not reported. The following general examples illustrate the implications of the process.

Intermediate school districts, Boards of Cooperative Educational Services (BOCES), and Joint Vocational Districts (JVD) frequently serve as grantee agencies for VEA and EHA VI-B grants and occasionally for grants under ESEA I and III. The pupils served under a grant are usually residents of a participating local school district, and the services are often provided in the individual districts. The data reported by the States do not include information below the intermediate unit administering the grant, and there is no way of recording the services received by pupils in each local district.

A similar situation occurs when several, usually very small, school districts band together to obtain a grant, but only one of the districts serves as the grantee agency. This is a common practice in States with a number of small districts that are eligible to receive ESEA I funds, but which can support a particular activity, e.g., hiring a remedial reading teacher, etc., only when their small individual obligations are combined. The reported data may create the appearance that only a portion of small districts in a State receive grants when, in fact, a much larger number of districts may be receiving the benefits of those funds.

State agencies other than a State education department may serve as grantee agencies, and in turn distribute funds to individual institutions throughout the State. For example, grants under the P.L. 89-313 amendment to ESEA I are commonly made to a State's mental health department. In such cases, the information reported on grants and grantee agencies is at an intermediate level rather than at a final recipient level, e.g., a State mental hospital. No information on individual recipient institutions is provided.
